ABOUT CANN

Cann beverages feature an array of unique flavors accompanied by a light cannabinoid blend for a micro-dosed experience. Without additional sweeteners or calories, these tonics offer consumers a “better for you” alternative. Backed by a celebrity lineup including Gwyneth Paltrow and Rebel Wilson, Cann continues to drive their mission of normalizing cannabis consumption.

The Los Angeles based company currently sits as the #1 THC beverage in brand awareness. Following surging sales, Cann is now available in CA, NV, IL, and MA, and plans to continue expansion into all legal US markets.

SORSE SOLUTIONS

Cann chose SORSE Technology as their emulsion provider due to the consistent consumer experience, safety and testing standards, and superior flavor profile. The SORSE operations team was involved from implementation throughout their first production run to ensure the process ran smoothly. SORSE continues to support Cann with their multistate production runs with our mobile unit, where a member of the SORSE team accompanies our equipment to convert the THC material onsite at the client’s licensed facility.
